

JULIE TONG

San Diego, CA | jtong0003@gmail.com | julietong.vercel.app

SKILLS

- Languages: C++, Python, JavaScript, TypeScript, Java, C#, HTML/CSS
- Frameworks & Libraries: React, Node.js, Express, Flask, Pandas, scikit-learn, Leaflet
- Databases & Tools: SQLite, Git/GitHub, Unity, Vite
- Languages: English & Vietnamese (Elementary)

EDUCATION

San Diego State University San Diego, CA
Bachelor of Science, Computer Science Expected Graduation: May 2027

Relevant Coursework: Algorithms, Operating Systems, Data Structures, Machine Learning

PROJECTS

USC Study Spots | *Personal Project* San Diego, CA
Full-Stack Developer Oct. 2025 - Sep. 2026

- Built a full-stack study spot discovery platform using JavaScript, Node.js, Express, SQLite, Leaflet, and OpenStreetMap with interactive maps, fuzzy search, tag filtering, geolocation, and persistent likes.
- Designed REST API endpoints and a SQLite-backed moderation workflow for user-submitted locations, including an admin dashboard for approving, rejecting, and deleting pending submissions.
- Added application security and reliability features including Zod validation, rate limiting, Helmet/CSP headers, HTML escaping, and token-protected admin routes.

Financial Transaction Category Classification | *Machine Learning Project* San Diego, CA
Machine Learning Developer Feb. 2026 - May 2026

- Developed a machine learning pipeline to classify financial transactions into spending categories using transaction descriptions and structured financial data.
- Engineered text, categorical, numerical, and temporal features using TF-IDF, encoding, standardization, and feature extraction techniques.
- Evaluated Logistic Regression, Decision Tree, KNN, and SVM models using accuracy, precision, recall, F1-score, confusion matrices, cross-validation, and runtime comparisons.

Healthcare Scheduling Optimizer | *Personal Project* San Diego, CA
Software Developer Aug. 2026 - Present

- Developing a scheduling application that assigns nurses to hospital shifts while enforcing availability and department qualification constraints.
- Implemented Python validation logic to determine nurse availability and eligibility for specific hospital departments.
- Designing scheduling logic to track nurse assignments and enforce workload and staffing constraints.

EXPERIENCE

GradeFlow Process Grader | *AI Club* San Diego, CA
Developer Jan. 2026 - May 2026

- Collaborated with a 4-person team to build a Python-based grading system that evaluates student work processes using engagement logs and revision history.
- Developed scoring logic for task coverage, resource usage, hint activity, and revision behavior using Pandas and structured JSON/CSV data.
- Integrated analysis results with a Flask backend to return process scores, ratings, and supporting metrics.
